

API Contract

Project: Enterprise IT Support Ticketing System / Phase 1 Deliverable / Implemented with FastAPI (Python)

Auth

Method	Endpoint	Role	Payload / Notes
POST	/api/auth/register	Public	{ name, email, password, role }
POST	/api/auth/login	Public	{ email, password } → { token, user }

Tickets

Method	Endpoint	Role	Payload / Notes
POST	/api/tickets	Employee	{ title, description, priority, category } → defaults status='open', assignee_id=null
GET	/api/tickets	Agent	All tickets. Query: ?status=&priority=
GET	/api/tickets/mine	Employee	Tickets created by the logged-in user
GET	/api/tickets/:id	Owner or Agent	Single ticket detail
PATCH	/api/tickets/:id/claim	Agent	Sets assignee_id to current agent
PATCH	/api/tickets/:id	Agent	{ status } — in_progress resolved closed

Comments

Method	Endpoint	Role	Payload / Notes
GET	/api/tickets/:id/comments	Owner or Agent	Chronological list
POST	/api/tickets/:id/comments	Owner or Agent	{ body }

Attachments (stretch goal)

Method	Endpoint	Role	Payload / Notes
POST	/api/tickets/:id/attachments	Owner or Agent	multipart/form-data, field 'file' (.png/.jpg) → { file_url }

Standard Error Responses

- 400 Bad Request — validation failure, e.g. missing title or invalid enum value
- 401 Unauthorized — missing/invalid JWT, or role not permitted for the action
- 404 Not Found — ticket, comment, or user id does not exist

All error bodies follow { error: string } and are rendered by the frontend as toast notifications rather than surfaced as console output.
